PROJECT PROPOSAL

ClubSphere

Smart Club Membership, Finance & Event Analytics System in Microsoft Excel, with Automated Letters and Certificates using Microsoft Word Mail Merge

One Club. One Platform. Smarter Management.

Course	24MNC201 - Essentials of Office Automation
Nature of Project	Individual Mini-Project (Maximum Marks: 40)
Student Name	Asif Hussain
Roll Number	57 (Register No. AJC25CS058)
Class	S3 CSA
Software Selected	Microsoft Excel (main prototype) and Microsoft Word (mail merge extension); no macros or programming

1. Project Title

ClubSphere - Smart Club Membership, Finance & Event Analytics System in Microsoft Excel, with Automated Letters and Certificates using Microsoft Word Mail Merge

2. Problem Statement / Purpose

A college club has to manage dozens of members, their membership renewals, fee payments, events and attendance. When these records are kept in separate lists, the coordinator cannot easily tell who is active, whose membership has expired, who still owes money or which events are well attended. Updates are repetitive, reports take long and errors creep in. The coordinator must also write the same kind of letter or certificate again and again for many members, which is slow and error-prone.

This project solves the problem in two connected parts. Part A is ClubSphere, a no-code Excel workbook that links all club records through Member ID and Event ID, calculates statuses and balances with formulas, and shows everything on one dashboard. Part B uses Microsoft Word mail merge to turn the same Excel data into personalised renewal letters and event participation certificates.

3. Objectives of the Project

Part A - Excel (main prototype)

- Link members, fees, events and attendance through unique Member IDs and Event IDs.
- Calculate renewal date, membership status, fee balance, payment status and event attendance automatically with formulas.
- Prevent wrong entries using dropdown lists and data validation, and highlight important statuses with conditional formatting.
- Present key figures, alerts and charts on a single dashboard, with a member profile lookup and formula-based reports.

Part B - Word mail merge (extension)

- Prepare a clean Excel data source from the ClubSphere workbook for renewal-letter and certificate recipients.
- Design a renewal letter whose wording changes automatically (IF fields) for expired, expiring and active members and for members with or without pending fees.
- Design a landscape participation certificate and produce certificates for one chosen event by filtering recipients.
- Merge the documents and save the results as Word and PDF files.

4. Software Selected

Microsoft Excel is the main software. It provides tables of records, formulas and functions (IF, EDATE, COUNTIFS, SUMIFS, INDEX, MATCH, LARGE), named ranges, data validation, conditional formatting, charts and page layout. Microsoft Word is used for the extension through its Mailings tools: Select Recipients, Filter, Insert Merge Field, Rules (If...Then...Else), Preview Results and Finish & Merge. No macros or programming are used in either part.

5. Main Features Planned

Part A - ClubSphere Excel workbook

- **Member Register:** renewal date, membership status, days to renewal and renewal alert calculated automatically.
- **Fee Tracker:** balance, payment status (Paid, Partial, Pending, Overdue) and days overdue calculated automatically.
- **Event Manager and Attendance:** registrations, present count, attendance % and seats filled; names and events fetched by lookup.
- **Member Profile:** pick a Member ID to see details, fees, attendance and engagement level on one page.
- **Reports:** department, membership type, payment status, monthly collections, event performance and engagement summaries.
- **Dashboard:** 8 KPI cards, smart alerts, 6 charts and leaderboards that update from the data.
- **Settings and checks:** named ranges for report date, alert window and membership length; dropdown validation; colour-coded statuses.

Part B - Word mail merge

- **Renewal letter:** merge fields and IF fields for personalised wording, with letterhead and a membership summary table.
- **Participation certificate:** landscape certificate with page border and merge fields for name, department, event, date and venue.
- **Targeted recipients and filtering:** letters only for members needing action; certificates for one event chosen by filtering the event name.
- **Outputs:** merged letters and certificates saved as Word files and exported as PDF.

6. Planned Files

File	Purpose	Type
ClubSphere_Working_Prototype.xlsx	Main working prototype: records, formulas, reports, dashboard	Excel
ClubSphere_MailMerge_Data.xlsx	Data source for the mail merge	Excel
Renewal Letter template	Letter with merge fields and IF fields	Word
Certificate template	Landscape participation certificate	Word
Merged renewal letters	Personalised letters for all recipients	Word and PDF
Merged certificates	Certificates for the chosen event	Word and PDF

7. Expected Outcome

With the ClubSphere sample data of 40 members (as on the report date 22 October 2026), the dashboard is expected to show 28 active, 12 expired and 5 expiring-soon memberships, with fees of Rs. 16,075 collected out of Rs. 22,050 billed (72.9%) and an average event attendance of about 80%. The Word mail merge is expected to produce 26 personalised renewal and fee letters and 13 participation certificates for the event "Excel Automation Lab" (selected from 78 attendance records), all without retyping any member information.

8. Submission Files

- Project Proposal (Word file)
- Working Prototype (Excel workbook, Word merge templates, data source and merged outputs)
- Project Documentation (Word or PDF)
- Recorded Video Presentation
